

A photograph of three white Nordex wind turbines standing in a field. The turbines are arranged in a line, with the central one being the most prominent. The background shows a vast field of crops, likely corn, under a blue sky with scattered white clouds. The text 'The Wind Power' is overlaid in large white font across the middle of the image.

The Wind Power

What we offer and how you can use it

The database

The background of the slide is a photograph of a wind farm. In the foreground, there is a field of sunflowers. In the middle ground, several white wind turbines are visible, standing on a slight rise. The sky is a clear, pale blue with some light clouds. The overall scene is bright and open.

The Wind Power is a quadrilingual (English/French/German/Spanish) database about wind energy. Whether you are a manufacturer of wind turbines or a wind farm developer, operator and owner, you will find the information you need here. The Internet's most comprehensive database on the wind energy sector offers a regularly updated source of information for the global market.

In addition, there are more than 12,800 photographs from wind farms and turbines. Statistics about wind energy in all countries where wind farms are installed, together with cartographic data, also included on the website.

Updated weekly, the site provides access to most of the data. For deeper research, it is possible to buy the databases.

The website

THE WINDPOWER
Wind Energy Market Intelligence

Online store | Online access | Contact

"Sometimes in the wind of change, we find our greatest direction."

The Wind Power is a comprehensive database of detailed raw statistics on the rapidly growing sphere of wind energy and its supporting markets.

The Wind Power tabulates data from a variety of players in the worldwide industry — wind farm developers, operators and owners, turbine manufacturers, to name only a few — into useable figures available in Excel, CSV, TSV, KMZ, and KML formats.

Our database provides direct and immediate access to information about regions, countries, manufacturers, types and numbers of turbines, hub heights, MWs/GWs, developers, operators, owners, and commissioning dates.

We include not only large, high-profile projects, but also the smaller, independent ones.

Subscribe to the monthly newsletter

On the web portal or in the regular newsletter, the reader can find statistics about the international wind energy market. Here you can find:

Wind farms from all over the world (onshore and offshore)

Manufacturers

- With their complete product range
- In which wind farms they are
- How much they produce...

Turbines

- You will find nearly every turbine which is active on the market
- Onshore or offshore, with or without gears (direct drive)...

Developers, operators and owners

- Detailed information, including contact details, where they operate, which turbines they prefer, how much MW...

Statistics

- For all countries worldwide
 - Production monitoring
 - How many MW of wind power...

Pictures and maps

Worldwide audience

The background image shows three tall, white wind turbines with three blades each, standing in a field of sunflowers. The sky is a clear, pale blue. The sunflowers in the foreground are in various stages of bloom, with some showing bright yellow heads. The overall scene is a rural landscape dedicated to renewable energy.

The Wind Power is distinguished by its very high quality, professional and global audience.

The Wind Power offers a complete approach which is achieved by interlinking different information, giving the interested reader the option of seeing in one glimpse which project is planned and by whom and which turbines are being used and by whom they are being operated.

The aim of the database is to include all wind farms, developers , operators, owners, manufacturers and turbines so that regular updates arrive weekly.

The content is mostly free, but for a more in depth analysis it is possible to buy databases (for further information see Prices & Services on the website).

Key figures for 2016:

- Visitors from all countries
- Approximately 30,000 unique visitors per month
- Approximately 230,000 pages printed per month

Database content

In June 2017, the whole database includes :

- More than 17,000 wind farms (399 GW operational or under production)
- More than 650 offshore projects (210 GW from the planned status to the operational status)
- More than 2,000 wind farms developers (with contact details for hundreds of them)
- More than 2,200 wind farms operators (with contact details for hundreds of them)
- More than 1,700 wind farms owners (with contact details for hundreds of them)
- More than 200 WTG manufacturers (with their contact details and product range)
- More than 1,480 WTG models (with their technical datasheet for hundreds of them)
- Installed capacity figures, year by year, for 110 countries
- Hundreds of interactive maps
